

Latest News from Hawkesbury Equine Vet Centre

- For those of you who haven't been to the hospital lately, we would like to inform you of our exciting new venture. We have recently purchased the adjoining property with the intention of expanding our consulting and breeding facilities. This will not only allow us to better service such procedures as embryo transfer, but also give us new facilities such as a loading ramp, round yard and an extra 5 comfortable and airy stables.
- We are in the process of upgrading our entry into the clinic and constructing a sealed road between the properties. When completed we will be encouraging all trucks and large rigs to enter as usual, but then to proceed straight through past the barn to next door to unload, and to then exit out through the next door gate. All normal traffic and floats may still use the exit gate on our original property if they wish.
- Our hospital Superintendant, Dr Emily Streckfuss, is doing a most professional job in the running of the hospital and the treatment of our medical and surgical cases. We believe this has greatly improved our level of communication with the owners of these patients.
- We continue to upgrade our medical equipment with the purchase of two of the latest ultrasound machines. These will further aid in the diagnosis of medical cases and allow our reproductive work to continue at an even higher level.
- We would also like to advise clients that our ever popular vet, Dougie Fountain, is now back to full duties and firing on all cylinders.
- As an update on our dental expert, Dr Gary Lai, he is further advancing his skills by attending an Advanced Dentistry workshop at the end of February and this will allow us to provide even better dental care for your horse.
- In addition to our great news we also have an offer to any client who wishes to have their horses used in the **Monty Roberts Demonstration** on 28th April 2007. We are coordinating the required horses. He has requested horses in 4 categories.

Starter horses, 2- 4 year olds unbroken, never been backed
Farrier problems, 4- 12 year olds (kicking or hard to trim feet)
Lungers – any age but must have picked up bad habits
Bad floaters – the worse the better.

- If you would like more information please contact the clinic on (02) 45774611 and we can give you all the details.
- 2007 is an exciting year for us and we look forward to working with you and continuing to provide excellent services and facilities to all our clientele.
